

SNOTE DOCUMENTATION

Snotee App Overview

Product description, platform notes, versioning, and release guidance.

APPLICATION: Snotee Note-Taking Platform

FOUNDER & CREATOR: Sadab

SHOWCASE WEBSITE: snotee.vercel.app

SOURCE REPOSITORY: github.com/shinuXcode/Snote

APP OVERVIEW

Snotee App Overview

1. SHORT DESCRIPTION

Snotee is an **open-source, local-first note-taking application** for handwriting, stylus input, rich text, pages, and document workflows, built with **Flutter**. Optional cloud functionality uses **Supabase** when configured. *It combines local SQLite privacy with instant multi-device cloud synchronization capabilities seamlessly.*

2. PRODUCT OVERVIEW

Snotee aims to combine a *responsive writing canvas with note organization and a focused interface*. Its codebase includes custom ink processing, stroke smoothing, rendering, local persistence, page and folder models, rich-text and PDF-related dependencies, account scoping, and optional cloud integration. *Advanced vector engines calculate smooth line paths with minimal stylus input latency.*

3. SUPPORTED PLATFORMS

The repository describes **Android, iOS, Windows, macOS, Linux, and Web**. The release asset list and CI status are authoritative for each version. Some builds may be unsigned or have reduced functionality. *Cross-platform compiled engines ensure fluid note creation regardless of host operating system.*

4. VERSIONING AND UPGRADES

The Flutter package version, website package version, and published release tag are different version domains. **Treat the release tag as the public release reference and update app metadata intentionally.** Back up important notes before upgrading. *Structured semantic versioning prevents unexpected API mismatches during major software releases.*

5. FOUNDER CREDIT

Snotee documentation credits **Sadab** as founder and creator. Maintainer and contributor credits should evolve with the project. *Dedicated open-source leadership fosters continuous innovation across digital note-taking user experiences.*
