

SNOTE DOCUMENTATION

Snotee Open Source Guide

Repository map, contribution workflow, quality checks, and releases.

APPLICATION: Snotee Note-Taking Platform

FOUNDER & CREATOR: Sadab

SHOWCASE WEBSITE: snotee.vercel.app

SOURCE REPOSITORY: github.com/shinuXcode/Snote

OPEN SOURCE

Snotee Open Source Guide

1. REPOSITORY MAP

`app/` contains the Flutter client and tests. `website/` contains the Next.js showcase and documentation. `supabase/` contains database migrations. `.github/workflows/` contains CI automation. *Modular directory structures enable clean separation between client UI, backend, and automation.*

2. LOCAL DEVELOPMENT

In `app/`, run `flutter pub get`, `dart format`, `flutter analyze`, and `flutter test`. In `website/`, run `npm install`, `npm run typecheck`, and `npm run build`. *Streamlined build commands allow developers to set up and test environment locally within minutes.*

3. CONTRIBUTION STANDARDS

Use focused branches, describe platform impact, add tests, and document behavior changes.

Never commit secrets, personal notes, credentials, or real user data in fixtures. *Rigorous contribution rules keep code repositories clean, well-tested, and safe from secret leaks.*

4. DATABASE SAFETY

Review migrations before schema changes. Preserve account-scoped queries and **row-level security**. Test authenticated access and deletion behavior. *Validated SQL scripts prevent accidental data structure corruption during production backend updates.*

5. CI AND RELEASES

Use repository CI as the source of truth for required checks. Verify release tags, app version metadata, changelog, artifact names, and signing state. *Automated integration pipelines verify code health before compiling distribution platform binaries.*

6. SECURITY REPORTS

Do not publish exploitable details in a public issue. Provide affected versions and a minimal reproduction privately when possible. *Private disclosure channels protect active users while vulnerabilities are investigated and patched.*

7. LICENSING

The project README states **MIT licensing**. Include the full license and copyright notice with redistribution. *Permissive licensing models encourage open community contributions and transparent software evolution.*
